

MHS GENESIS Fact Sheet

BACKGROUND

The mission of the Program Executive Office Defense Healthcare Management Systems (PEO DHMS) is to efficiently improve healthcare for the active duty military, Veterans, and beneficiaries by modernizing the electronic health record (EHR) for the Military Health System (MHS). The Department of Defense's (DoD) EHR, officially named MHS GENESIS, will establish seamless medical data sharing between the DoD, Department of Veterans Affairs (VA), and the private sector.

KEY MESSAGES

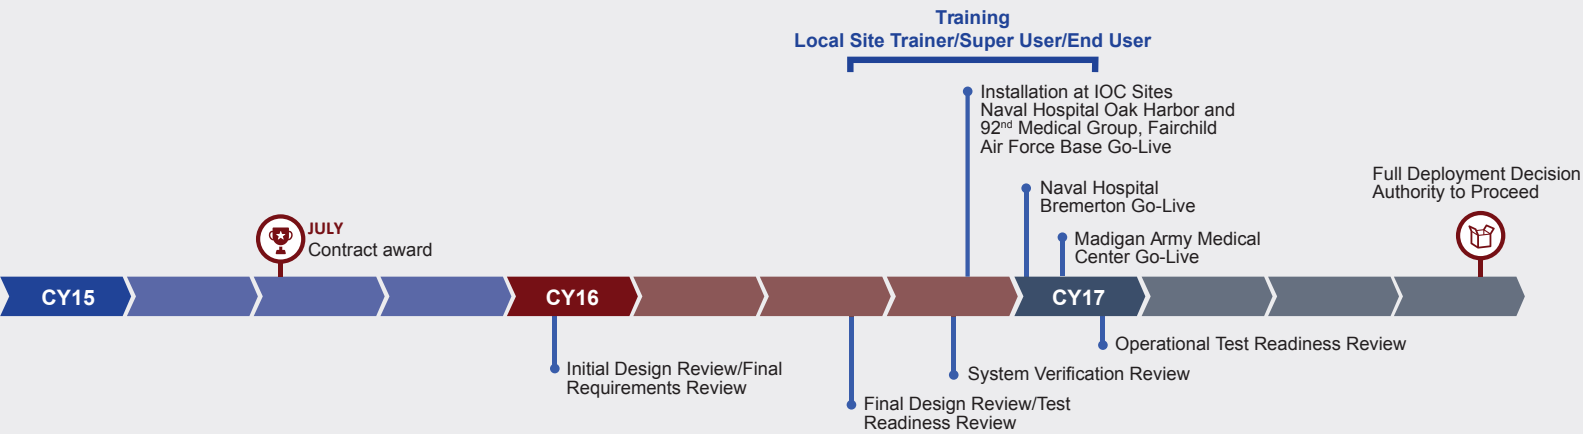

- MHS GENESIS will help us respond to increasing demand for access, availability, entry, and portability of health information across the spectrum of military operations, the VA, and civilian healthcare professionals.
- DoD is committed to ensuring Service Members and families are ready to support operational mission requirements and ensuring continuity of care as members transition to Veteran status.
- To keep pace with medical advances and innovations in technology, MHS GENESIS will support us in our mission to continue to provide high quality healthcare to beneficiaries, as well as an agile, responsive system for healthcare professionals with minimal disruption to enhance care.
- MHS GENESIS utilizes a proven commercial EHR in use today by highly reputable hospital systems in the private sector, and allows for a system design and engineering processes that will enable system improvements through upgrades of individual hardware, software modules, or interfaces with newer modular components without redesign of the entire system or large portions thereof.
- MHS GENESIS will support our medical and dental community in providing safe, high quality healthcare and wellness to our Service Members, their families, and our allies across the globe.

BENEFITS

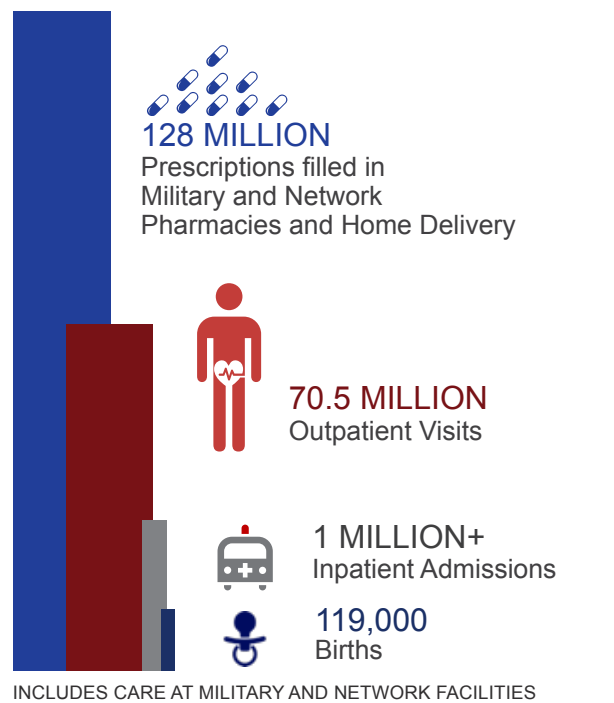

- MHS GENESIS is an integrated system that will facilitate the safe transitions of care across the spectrum of military operations to include garrison, theater, and en route care.
- Healthcare professionals can more easily monitor a beneficiary's health status through greater population health data, tracking, and alerting capabilities.
- MHS GENESIS will support data interoperability requirements, enabling the sharing of health information with the VA and other external healthcare organizations to improve care transitions and improve health care delivery coordination.
- Emerging from the longstanding need to be able to share and exchange data, MHS GENESIS will support local, national, and inter-governmental data exchange by using an open platform, and applying commercial standards and 21st century technology to provide a stable foundation for long-term interoperability.
- MHS GENESIS will provide you greater access to your personal healthcare information and support increased engagement in health related activities.
